INSTALLING & ADJUSTING

TRANSPORT MODES:

- When wheeling in multiple sections make sure the dock section is in the transport position. Once the docks are in position lift the section up and install in the locked position.

ROLLING-IN:

- When rolling-multiple sections together make sure all the sections are in the transport mode, this allows the sections to pivot when going across uneven terrain. Once in the final position lift the dock section up and place into the locked mode.

DOCK HEIGHT:

- We recommend setting the top of the dock at least 18" above the water. For rough lakes with high wave action and lots of boat traffic we suggest setting the top of the dock 24" above the water.

**Clockwise to lower
Counter clockwise to raise**

LEVELING DOCK:

- To adjust the dock you will need a 1 1/8" socket and a cordless drill. When extending or retracting the legs make sure the clutch mode is engaged, failure to use the clutch might result in damage to yourself or the mechanism. When leveling alternate between legs every 3-4" to prevent binding.

DRILL WILL COME TO A SUDDEN STOP WHEN LEG IS FULLY EXTENDED.

DO NOT USE MORE THAN 15 FT/LBS OF FORCE.

DOCK CAP:

- When finished insert the plastic dock cap into the hole to cover the adjusting nut.
